

Understanding Your VUS Arrhythmia Genetic Test Result

INFORMATION FOR PATIENTS WITH A VARIANT OF UNKNOWN SIGNIFICANCE

Result	VUS	Your testing shows that you have a variant of unknown significance (VUS) in a gene that causes an inherited arrhythmia like Brugada syndrome, long QT syndrome, or CPVT. A VUS is a gene change, but we do not know if it causes arrhythmia or not.
Diagnosis	NO CHANGE	This testing does not change your cardiovascular diagnosis. If you have been diagnosed with long QT syndrome or some other inherited arrhythmia, that remains the same.
Further Testing	FOR FAMILY MEMBERS	Testing your family members that have arrhythmia may help explain this VUS. Talk with your doctor or genetic counselor about which family members may be helpful to test.
	FOR YOU	More genetic testing may be right for you. Please talk about this with your doctor or genetic counselor.
Management Options	PATIENTS WITH AN ARRHYTHMIA	Treatment options include: medications, surgery, pacemakers, implantable cardioverter defibrillators (ICDs), or avoiding certain athletic activities. Talk to your doctor about which may be right for you.
Screening Options	PATIENTS WITH A FAMILY HISTORY OF ARRHYTHMIA, BUT NO SIGNS OF IT THEMSELVES	Options for screening and early detection include: physical exams or electrocardiograms (EKGs). Talk to your doctor about whether these options are right for you.
Next Steps	DISCUSS	Please share this with family members so they can talk with their doctors and learn more.

Arrhythmias in the Family

Even though your genetic testing result was a VUS, some arrhythmias (including Brugada syndrome and long QT syndrome) can still run in families. All close family members of someone with an inherited arrhythmia (like parents, brothers, sisters, children) should talk with their doctor about screening.

Please talk with your doctor or genetic counselor about this. The field of genetics is continuously changing, so updates related to your result, medical recommendations, and/or potential treatments may be available over time. This information is not meant to replace a discussion with a healthcare provider, and should not be considered or taken as medical advice.
