Understanding Your VUS Hypertrophic Cardiomyopathy (HCM) Genetic Test Result

Your testing shows that you have a variant of unknown significance (VUS) in a gene that causes HCM. A VUS is a gene change, but we do not know if it causes HCM or not.

Diagnosis

This testing does not change your cardiovascular diagnosis. If you have been diagnosed with HCM, that remains the same.

Further Testing

for family members

Testing your family members that have HCM may help explain this VUS. Talk with your doctor or genetic counselor about which family members may be helpful to test.

for you

More genetic testing may be right for you. Please talk about this with your doctor or genetic counselor.

Management Options

Options for screening and early detection include physical exams, echocardiograms, electrocardiograms (EKGs), or cardiac MRI. Talk to your doctor about which may be right for you.

Screening Options

Options for screening and early detection include physical exams, echocardiograms, electrocardiograms (EKGs), or cardiac MRI. Talk to your doctor about whether these options are right for you.

Next Steps

Please share this with family members so they can talk with their doctors and learn more.

Reach Out

Patients with HCM

Treatments may include medications, surgery, pacemakers, implantable cardioverter defibrillators (ICDs), or avoiding certain athletic activities. Talk to your doctor about which may be right for you.

Patients with HCM, but no symptoms

Options for screening and early detection include physical exams, echocardiograms, electrocardiograms (EKGs), or cardiac MRI. Talk to your doctor about whether these options are right for you.

Family history of HCM, but no symptoms themselves

Options for screening and early detection include physical exams, echocardiograms, electrocardiograms (EKGs), or cardiac MRI. Talk to your doctor about whether these options are right for you.

HCM in the Family

Even though your genetic testing result was a VUS, HCM usually runs in families. All close family members of someone with HCM (like parents, brothers, sisters, children) should talk with their doctor about screening.

HCM in the Family

Even though your genetic testing result was a VUS, HCM usually runs in families. All close family members of someone with HCM (like parents, brothers, sisters, children) should talk with their doctor about screening.

Please talk with your doctor or genetic counselor about this. The field of genetics is continuously changing, so updates related to your result, medical recommendations, and/or potential treatments may be available over time. This information is not meant to replace a discussion with a healthcare provider, and should not be considered or taken as medical advice.

Has HCM

Should talk to their doctor about screening
