

# Clinician Management Resource for CDKN2A

This overview of clinical management guidelines is based on this patient's positive test result for a *CDKN2A* gene mutation. Unless otherwise stated, medical management guidelines used here are limited to those issued by the National Comprehensive Cancer Network® (NCCN®)<sup>1,2</sup> in the U.S. Please consult the referenced guideline for complete details and further information.

Clinical correlation with the patient's past medical history, treatments, surgeries and family history may lead to changes in clinical management decisions; therefore, other management recommendations may be considered. Genetic testing results and medical society guidelines help inform medical management decisions but do not constitute formal recommendations. Discussions of medical management decisions and individualized treatment plans should be made in consultation between each patient and his or her healthcare provider, and may change over time.

SCREENING/SURGICAL CONSIDERATIONS <sup>1,*</sup>	AGE TO START	FREQUENCY	
Melanoma			
Comprehensive skin examination by a dermatologist, supplemented with total body photography and dermoscopy is recommended. <sup>2</sup>	Individualized	Biannually	
Pancreatic Cancer <sup>†</sup>			
Consider screening using contrast-enhanced MRI/MRCP and/or EUS <sup>†</sup>	40 years old, or 10 years younger than the earliest exocrine pancreatic cancer diagnosis in the family, whichever is earlier	Annually. May consider shorter screening intervals based on clinical judgment for individuals found to have worrisome abnormalities on screening.	

- \* Increased multidisciplinary cancer surveillance beyond pancreatic and dermatologic management is recommended for individuals with pathogenic or likely pathogenic variants that specifically disrupt the p14ARF protein. This may include annual full-body and brain MRI based on the presentation in individuals/families.<sup>2</sup>
- † For individuals considering pancreatic cancer screening, the panel recommends that screening be performed in experienced high-volume centers. The panel recommends that such screening only take place after an in-depth discussion about the potential limitations to screening, including cost, the high incidence of benign or indeterminate pancreatic abnormalities, and uncertainties about the potential benefits of pancreatic cancer screening. Most small cystic lesions found on screening will not warrant biopsy, surgical resection, or any other intervention.

# Understanding Your Positive CDKN2A Genetic Test Result

#### INFORMATION FOR PATIENTS WITH A PATHOGENIC MUTATION OR VARIANT, LIKELY PATHOGENIC

### 5 Things To Know

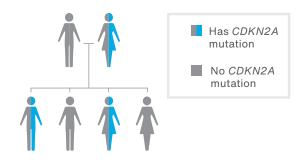

1	CDKN2A mutation	Your testing shows that you have a pathogenic mutation or a variant that is likely pathogenic in the <i>CDKN2A</i> gene.
2	Melanoma-pancreatic cancer syndrome	People with <i>CDKN2A</i> mutations have melanoma-pancreatic cancer syndrome (also known as familial atypical multiple mole melanoma or FAMMM).
3	Cancer risks	You have an increased chance to develop melanoma (skin cancer) and pancreatic cancer.
4	What you can do	Risk management decisions are very personal. There are options to detect cancer early or lower the risk to develop cancer. It is important to discuss these options with your doctor and decide on a plan that works for you.
5	Family	Family members may also be at risk – they can be tested for the <i>CDKN2A</i> mutation that was identified in you. It is recommended that you share this information with your family members so they can learn more and discuss with their healthcare providers.

#### CDKN2A Mutation Lifetime Cancer Risks\*

## CDKN2A Mutations in the Family

There is a 50/50 random chance to pass on a *CDKN2A* mutation to each of your children. The image below shows that everyone can carry and pass on these mutations, regardless of their sex at birth.

<sup>\*</sup> Because risk estimates vary in different studies, only approximate risks are given. Cancer risks will differ based on individual and family history.

- · Canadian Society of Genetic Counsellors cagc-accg.ca

Please discuss this information with your healthcare provider. The cancer genetics field is continuously evolving, so updates related to your *CDKN2A* result, medical recommendations, and/or potential treatments may be available over time. This information is not meant to replace a discussion with a healthcare provider, and should not be considered or interpreted as medical advice.
