Understanding Your Positive *PDGFRA* Genetic Test Result INFORMATION FOR PATIENTS WITH A PATHOGENIC MUTATION OR VARIANT, LIKELY PATHOGENIC

4 Things To Know

1	PDGFRA mutation	Your testing shows that you have a pathogenic mutation or a variant that is likely pathogenic in the <i>PDGFRA</i> gene.
2	Cancer risks and other medical concerns	You have an increased chance to develop gastrointestinal stromal tumors (GISTs) and non- cancerous growths (inflammatory type polyps) in the stomach or colon.
3	What you can do	Risk management decisions are very personal. There are options to detect cancer early or lower the risk to develop cancer. It is important to discuss these options with your healthcare provider and decide on a plan that works for you.
4	Family	Family members may also be at risk – they can be tested for the <i>PDGFRA</i> mutation that was found in you. It is recommended that you share this information with your family members so they can learn more and discuss with their healthcare providers.

PDGFRA Mutations in the Family

There is a 50/50 random chance to pass on a *PDGFRA* mutation to each of your children. The image to the right shows that everyone can carry and pass on these mutations, regardless of their sex at birth.
