

Understanding Your Positive *TMEM127* Genetic Test Result

INFORMATION FOR PATIENTS WITH A PATHOGENIC MUTATION OR VARIANT, LIKELY PATHOGENIC

4 Things to Know

1	<i>TMEM127</i> mutation	Your testing shows that you have a pathogenic mutation or a variant that is likely pathogenic in the <i>TMEM127</i> gene.
2	Non-cancerous tumor and cancer risks	You have an increased chance to develop pheochromocytomas (PCC), and possibly also paragangliomas (PGLs). These are rare tumors that affect your endocrine system, which makes and controls your hormones. PGLs/PCCs are not typically cancerous but may require treatment; some can become cancerous.
3	What you can do	Risk management decisions are very personal. There are options to detect tumors early or lower the risk to develop tumors. It is important to discuss these options with your doctor and decide on a plan that works for you.
4	Family	Family members may also be at risk – they can be tested for the <i>TMEM127</i> mutation that was found in you. It is recommended that you share this information with family members so they can learn more and discuss this with their healthcare providers.

TMEM127 Mutations in the Family

There is a 50/50 random chance to pass on a *TMEM127* mutation to each of your children. The image to the right shows that everyone can carry and pass on these mutations, regardless of their sex at birth.
