

Understanding Your Moderate Risk *CHEK2* Genetic Test Result Information for patients with a moderate risk pathogenic or likely pathogenic variant

5 Things To Know

1	Result	Your testing shows that you have a moderate risk pathogenic or likely pathogenic (P/LP) variant in the CHEK2 gene.
2	Moderate Risk	Moderate risk P/LP variants in CHEK2 may increase cancer risks, but less than typical CHEK2 P/LP variants do.
3	Cancer risks	Moderate risk P/LP variants do not cause the same cancer risks as other P/LP variants in CHEK2. You may have an increased risk of breast cancer, but the risk is lower than that of typical CHEK2 P/LP variants.
		Individuals with moderate risk P/LP variants generally do not have the same medical management
4	What you can do	guidelines as individuals with typical <i>CHEK2</i> P/LP variants. Risk management decisions are very personal. There are options to detect cancer early or lower the risk to develop cancer. It is important to discuss your specific risks and options with your healthcare provider and decide on a plan that works for you.

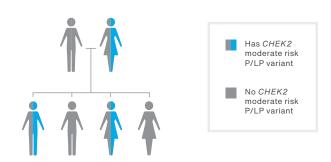

CHEK2 Breast Cancer Risks*

^{*} Because risk estimates vary in different studies, only approximate risks are given. Cancer risks will differ based on individual and family history.

CHEK2 in the Family

There is a 50/50 random chance to pass on the moderate risk *CHEK2* P/LP variant to each of your children.
